

SALES DEPARTMENT BRIEF

The Big Picture

Everything that's changing, in plain English

Accelerated Experiences, LLC

Prepared for Barry Burris · Sales Director

July 23, 2026

Barry — a lot is moving at once, all of it in your favor. Here's the whole thing in plain English: what's changing, why, the new product names and what each one means, and how the sales system is being built to guide you. Nothing here changes your prices or your job — it makes both easier.

1. The big idea: uniform and easy

We're pulling everything onto one clean, consistent system. The product line got clearer names, our own company system is being rebuilt to look and run better, and a sales system is being put in place that walks you through each step. The headline you should really hear:

The system you'll sell is almost the exact system you'll use to sell it.

That means when you show a prospect the product, you're not describing a brochure — you're showing the same tool that's helping you find them, pitch them, and follow up. It sells itself because you're living proof it works.

2. The rename: “Hub” became “OS” — here's why

We used to call each product a “hub.” The problem: ask ten business owners what a “hub” is and you get ten shrugs. It sounds like a nice-to-have. So we renamed every one to an **“OS” — an operating system.**

Everybody already knows what that means: the thing a business **runs on.** The name now does three things before you say a word — it explains what it is, it makes it feel essential (infrastructure, not an add-on), and it raises the value in the buyer's mind. Same product, stronger word.

You can still say “hub” casually. The **product name** is “[Name] OS · Version 6.1” with three tiers — **Lite · Standard · Grandsuite.**

3. The new names — and what each one means

The names aren't random. Each one is a word from that industry, so the name itself speaks the customer's language. Learn these — they're great door-openers:

OS name	Vertical	What the name means
Abode OS	Real estate	"Abode" means a home — the place you live. Real estate is the business of homes.
Buttress OS	Architecture	A buttress is the structure built to hold a wall up. Pure architecture — the support behind the firm.
Truss OS	Engineering	A truss is the engineered framework of beams that carries a load — bridges, roofs. Pure engineering.
Musical OS	Live theater	A musical is live theater at its biggest — the system for putting on the show.
8mm OS	Film & production	8mm is classic film stock — the language of movies. The system for film and production houses.
Amphitheater OS	Concerts & venues	An amphitheater is the great live-performance venue — the system for concerts and venues.
LilNinja OS	Kids gyms	Kids' gyms are ninja courses, tumbling, and play. Playful and kid-first by name.
4barrel OS	Used-car dealers	A 4-barrel is a high-performance carburetor — horsepower, engines, car-guy language. The lot's system.
Targeted OS	Marketing (your flagship)	Marketing is about targeting the right audience. It's the one you lead with — and your own hub proves it.
AE OS	The mother platform	Accelerated Experiences' own top-of-the-line system — the machine every OS above is built from.

Two auto products were **retired** (the old "Driveline" and "Motorcade"). Point any car-dealer conversation at **4barrel OS**. (See your earlier retirement brief.)

One thing to know about how these are built: the OS is **modular** — it's one big system built out of **departments** (Sales, Accounting, Production, Research, and so on). We can take departments off or add them to tailor each vertical. That's how each "showroom" OS is customized to fit its industry.

Customization: add a department, à la carte — the system does the math

The building blocks are **departments**, and **they don't all cost the same** (a full Accounting department isn't priced like a simple records room). A customer can **customize by adding the departments they want**, and **the system adds up the price automatically** — no hand-math. When they buy, those numbers **run all the way through to accounting** — invoice and revenue booked for you. (Anthony sets each department's price; you just assemble what the customer wants.)

It's all ONE uniform pricing system

The tiers and the à la carte departments aren't two separate price lists — they're **one uniform system**. The three tiers are just pre-built bundles of departments, and adding a department uses the **same consistent per-department price**. So no matter how a customer starts (a tier) or customizes (add departments), the numbers always fit together and add up the same way. Uniform, predictable, never contradictory.

4. The Sales Department — AI guides you through the sale

This is the part built for you. You've got the CRM and the data; what's being put in place is a **sales system that runs the play for you** so you never wonder “what do I do next?” Two ways a sale starts:

- **A lead comes in** — a prospect lands in your pipeline, and the system queues it up for you.
- **You start one** — you pick a prospect from your CRM, or pick an OS vertical you want to go after, and kick off a campaign.

From there, the AI agents guide you in a set order, and the system follows that order so you don't have to hold it all in your head:

- **Prioritize** — who's most worth your time right now, with the reasons why.
- **Streamline** — the next best step laid out, not a blank page.
- **Execute** — it drafts the outreach, writes the social posts, builds a landing page, and drafts organic ads — right there in the flow.
- **Follow up** — it reminds you and teed up the next touch so nothing slips.

And it hands you the **story** — the data and talking points that make the case — so you can walk in confident even though this is new to you. You're not selling on nerve; you're selling with a system and a script.

The whole sales idea in one line

You sell the OS by using the OS. It finds the lead, guides the pitch, makes the content, and follows up — the same thing the customer is buying.

5. Our own system is being rebuilt too (so it matches what you sell)

Behind the scenes, our own company system (AE OS) is getting the same upgrade — a cleaner, better-looking, easier version — so the thing you demo and the thing we run are basically the same. A few things you'll notice:

- **It looks the part.** A polished, modern finish so “the top tier” looks like the premium product it is.
- **Skins.** The look can change per person — you can have your own theme, different from Anthony's, the moment you sign in. Seasonal and sharp options, one tap.
- **Nothing is lost.** Every tool that's there today stays. We're only making it cleaner and easier — never taking anything away.
- **Easy first.** The number-one rule of the rebuild is that a non-technical person can pick it up and use it. That's you — and that's your customer.

6. What this means for you — the bottom line

- **One clean line, easy to explain** — nine OS products, clear names, three simple tiers, same prices.
- **A system that sells with you** — it prioritizes, drafts, and follows up so you're guided at every step.
- **You're the proof** — you close deals using the exact product you're selling.
- **Nothing got harder** — prices, tiers, and your role are unchanged; everything just got clearer and more supported.

If you remember one thing

We made everything uniform and easy, renamed the line so the names sell themselves, and built a sales system that guides you step by step. You go to market with almost the same system you'll be selling — which is exactly why you'll be able to sell it with confidence.

Questions on any of this → Anthony. Prices and tiers unchanged; this brief is the plain-English overview of the changes. — Accelerated Experiences, LLC · AEHub Founder V7.1.
